

## Questions related to short- and long-term monitoring

- Was there anything you heard as part of the monitoring update that influenced your current thinking?
- Any suggestions on how we might modify the monitoring plan now that we have three years of baseline data?
- Any other ways we should be analyzing the data?

# The power of Before-After Control-Impact Designs

# Example of a BACI Design- Arkansas River, CO

1993

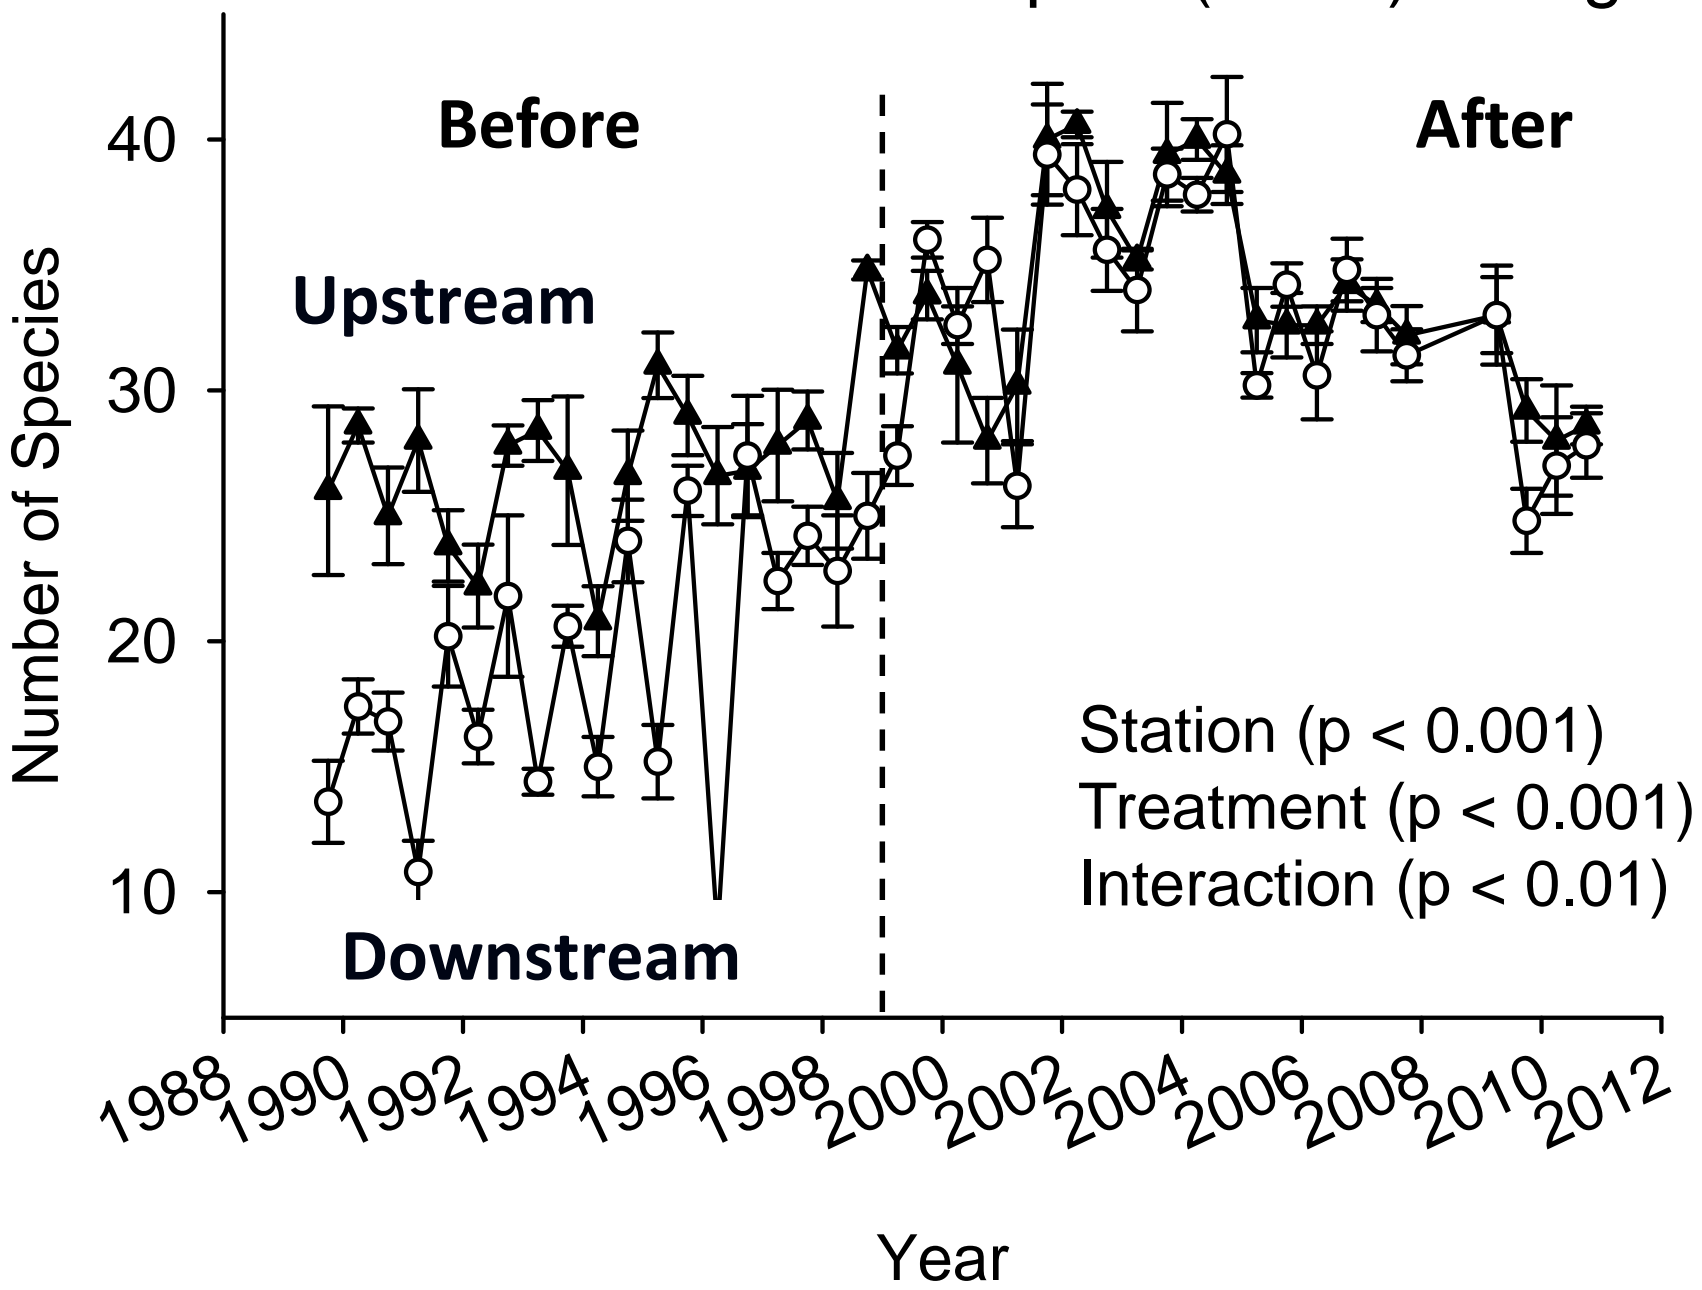

2015

## Notes from short- and long-term monitoring

- How do we decide which endpoints should be retained as we move forward with remediation?
- I would like to see a few more details on how these decisions will be made
- Will require significant transparency and involvement of the SRST (similar to decision on using fish plugs for Hg analysis)
